

Healthcare products have extensively changed under the Affordable Care Act leaving consumers with:

- Record High Premiums
- Record High Deductibles
- Few Cost Effective Choices for Individuals, Families and Small Business & Employees

Connect2Docs specializes in two specific areas of healthcare: Telemedicine and Prescription Drug Savings.

So, what is Telemedicine?

Telemedicine uses a telephone, computer or tablet to talk with a doctor with regards to a medical concern or issue. The service is available 24/7/365 from anywhere your device can connect to a phone line, cell tower or high speed internet connection. According to the AMA, 70% of all doctor's office visits and 40% of all emergency room visits could be handled by using telemedicine. Many minor medical conditions such as: Cold & Flu Symptoms, Allergies, Bronchitis, Urinary Tract Infections, Respiratory Infection, Sinus issues & many more can be addressed and medications prescribed (other than controlled substances) if the physician determines it is appropriate.

Why Telemedicine?

- Cost – Significantly less than an Office or Emergency Room Visit
- Convenience – Available 24/7/365 from virtually anywhere in the U.S.
- Time – Little or no waiting, average response time is less than 20 minutes
- Safe – All physicians are U.S. based & Board Certified with an average of 20 yrs experience
